

# Arianne Jasmine B. Tan

aj.yannie@gmail.com | linkedin.com/in/yannie28/ | +65 87192235

Technical Lead and Microsoft-certified engineer with 7 years of experience delivering enterprise case-management and tax systems using Dynamics 365, Azure, C#, .NET and event-driven microservices. Leads solution design, engineering standards, cross-functional delivery, integration readiness and production cutovers, with hands-on experience guiding developers and coordinating stakeholders across complex programs.

## TECHNICAL EXPERIENCE

### TECHNICAL LEAD, Inland Revenue Authority of Singapore (IRAS)

January 2023 – Present | Newton, Singapore

#### IRIN3 Phase 3 CDE / Small Volume Tax

Core Strengths: Technical Leadership, Agile/Scrum Delivery, Stakeholder Management, Sprint/Release Coordination, Azure DevOps, API/Microservices Design, Kafka, .NET Core, Git, SonarQube, GitHub Copilot, Microsoft 365 Copilot

- **Led end-to-end technical delivery** by defining solution approaches, documenting API endpoints, batch workflows and Kafka topics, and producing more than 46 technical wiki pages that gave frontend, backend, QE and application teams clearer implementation direction and reduced dependency blockers.
- **Drove agile delivery across multiple workstreams** by aligning Product Owners, Business Analysts, developers and QE teams on requirements, design decisions, sprint priorities, defect readiness and release checkpoints for sprint deliverables
- **Improved SIT and UAT readiness** by triaging defects, removing environment and data blockers, validating fixes before user retesting, and coordinating cross-domain resolution throughout integration and user-acceptance testing.
- **Standardised delivery governance using Azure DevOps** by managing pull requests, branching strategy, deployment planning and bug lifecycle processes across developers, BAs and QE teams, improving transparency from defect creation through fix deployment, pre-validation and user retesting.
- **Coached developers and uplifted engineering practices** through local testing guidance, IRIN3 best-practice sharing, Application Insights, Storage Account and Log Analytics walkthroughs, pull request reviews, unit testing expectations, SonarQube quality checks, Penetration Testing best practices, and System Performance best practices.
- **Applied AI-assisted engineering and collaboration practices** by using GitHub Copilot to accelerate code exploration, implementation drafts, unit-test creation and technical documentation, and Microsoft 365 Copilot to streamline meeting summaries, action tracking and stakeholder communications.
- **Improved release and production cutover readiness for SVT** by coordinating with IRAS vendors on the legacy system shutdown, IRAS cutover teams and data migration teams for the overall cutover plan, and application product owners for their key business transaction testing, rollback tasks, and environment readiness
- **Strengthened migration and integration readiness** by preparing mapping documentation across 4 IRIN2 tables, 7 SVT tables and 28 reference tables, collaborating with legacy-system vendors and data migration teams, and supporting XML-to-JSON mapping for Unified Data Platform (reports) requirements.

#### IRIN3 Phase 3 AB / Case Management System (Individual Income Tax)

Core Strengths: Technical Leadership, Dynamics 365, Solution Design, C#, .NET Framework, Azure DevOps, CI/CD, Microservices Integration, Clean Architecture, DDD, SonarQube, FakeXrmEasy

- **Directed solution design for CRM1's largest features** by producing end-to-end technical designs for Archival Reporting, File Attachments, Auto Interim Replies and post-migration processing, covering golden flows, dependencies, parallel execution and recovery actions to give developers clear implementation direction.
- **Led Contact Case Management routing and P2–P3 harmonisation** as the lead and sole developer, delivering routing for unauthenticated emails, digital-service correspondence and hard-copy correspondence while merging the production D365 codebase into the current development stream to preserve existing behaviour and support the next release.
- **Served as the team's technical escalation point** by resolving design and coding issues, allocating work to prevent duplication, aligning integrations across domains, and owning deployments and corrective fixes across Dynamics 365 and Case Microservice.

- **Improved maintainability and code quality in the D365 repository** by introducing a reusable clean-architecture and domain-driven design structure for .NET Framework, reducing duplication, addressing SonarQube findings and establishing a consistent pattern adopted by the development team.
- **Accelerated unit-test feedback for D365 developers** by creating OpenCover and ReportGenerator batch tooling that mirrored SonarQube exclusions, enabled reliable local coverage checks and helped the team assess the >80% coverage target without waiting for pipeline builds.
- **Aligned queue design across more than 10 IRAS divisions** by running user walkthroughs with business analysts, finalising D365 routing queues, and agreeing naming conventions and user setup with the operations team to support consistent adoption.

## SOFTWARE ENGINEER, Inland Revenue Authority of Singapore (IRAS)

November 2019 – December 2022 (3 years) | Newton, Singapore

### IRIN3 Phase 2 / Case Management System (Stamp Duty Tax)

Languages and Framework: C#, Javascript, .Net Framework, .Net Core

Tools and Packages: Dynamics 365, Power Platform, Dynamics CRM SDK, XRMToolbox, FakeXrmEasy, Git, SonarQube, Kafka, Docker, Git

- **Translated business needs into delivery-ready solutions** by partnering with Product Owners and stakeholders to refine user stories, storyboards, and functional workflow diagrams, giving the development team clearer requirements and reducing ambiguity during Agile delivery.
- **Improved code quality and release readiness** by developing Dynamics 365 features with unit tests and using Git-based commits and pull requests to support controlled reviews and integration into the master branch.
- **Delivered a tailored case-management experience** by building a model-driven application interface with Dynamics 365 entity customisations and JavaScript web resources, enabling workflows aligned with business processes.
- **Reduced manual case-assignment effort** by automating routing through Dynamics 365 workflows, custom workflow activities, and plugins, allowing work items to be directed without users assigning each item manually.
- **Enabled reliable integration with external systems** by developing custom APIs, virtual entities, and Dynamics 365 plugins, supported by unit tests that improved confidence in integration quality and readiness.
- **Made deployments repeatable across environments** by packaging Dynamics 365 solutions and patches and promoting them from development to higher environments through Azure Pipelines.
- **Achieved 100% resolution of critical defects** by supporting integration testing and user acceptance testing, investigating reported issues, and delivering the fixes required for release readiness.
- **Accelerated knowledge transfer and ongoing maintenance** by creating project technical documentation that gave maintenance teams and external projects a clear reference for the current system.
- **Enabled event-driven data exchange between Dynamics 365 and microservices** by building an adapter layer that subscribes to Kafka events and sends the resulting data to Dynamics 365 through its web service, reducing direct coupling between systems.
- **Automated recurring user-access updates** by developing a Logic Apps scheduler that triggers a custom API to update business units, seniorities, and queue membership through the Dynamics 365 web service, reducing manual administration and keeping access data current.

## INDEPENDENT PROJECTS

### DIGITAL TWIN | AI CHATBOT | [github.com/yannie28/digital.twin](https://github.com/yannie28/digital.twin)

Technologies: Python, OpenAI Agents SDK, Gradio, Cursor, Multi-Shot Prompting, Structured Outputs, LLM Guardrails, Tool Calling

- **Built an agentic AI chatbot with reliable response patterns** using the OpenAI Agents SDK and a Gradio conversational interface, applying multi-shot prompting to guide model behaviour and structured outputs to produce predictable, application-ready responses.
- **Enabled action-oriented conversations through tool calling** by integrating a notification capability that allows the agent to invoke an external function in response to user requests.
- **Implemented layered LLM guardrails** by using a separate language model to evaluate user inputs and generate outputs, adding validation around the chatbot's end-to-end interaction flow.

## EXAMS & CERTIFICATION

**AI ENGINEER CORE TRACK: LLM ENGINEERING, RAG, QLORA, AGENTS**

UDEMY

Issued August 2026 | No Expiration Date

**AI ENGINEER AGENTIC TRACK: THE COMPLETE AGENT AND MCP COURSE**

UDEMY

Issued August 2026 | No Expiration Date

**PL 400 MICROSOFT CERTIFIED: POWER PLATFORM DEVELOPER ASSOCIATE**

MICROSOFT

Issued June 2022 | Expires June 2027

**MB 200 MICROSOFT POWER PLATFORM + DYNAMICS 365 CORE**

MICROSOFT

Issued October 2020 | No Expiration Date

**AZ 204 MICROSOFT CERTIFIED: AZURE DEVELOPER ASSOCIATE**

MICROSOFT

Issued March 2020 | Expires March 2027

**AZ 104 MICROSOFT CERTIFIED: AZURE ADMINISTRATOR**

MICROSOFT

Issued May 2023 | Expires May 2027

## EDUCATION

**UNIVERSITY OF SANTO TOMAS**

**BACHELOR OF SCIENCE IN COMPUTER SCIENCE SPECIALIZED IN DATA SCIENCE**

August 2015 – June 2019 | Manila, Philippines

- Awards: Magna Cum Laude | Salutatorian | Gold Loyalty Awardee
- GPA: 3.7/4.0 | GWA: 1.415/1.00

**UNIVERSITY OF SANTO TOMAS**

**HIGH SCHOOL DIPLOMA**

June 2011 – April 2015 | Manila, Philippines

- Awards: Salutatorian | Leadership Awardee | Silver Loyalty Awardee
